PROFESSIONAL SUMMARY

Full-stack developer building web and mobile apps since 2023 with **TypeScript**, **React**, **Node.js** and **PostgreSQL**. At Simple Business Group I built, on my own with Claude Code, a production system that classifies and routes inbound requests with the **Claude API**, with human approval in Slack when it isn't sure. Before that I built banking apps and APIs at Media Revolution and Angular interfaces for Network Solutions at Newfold. Spanish native, English C1.

CORE COMPETENCIES

TypeScript, React & Next.js | Angular | Node.js, NestJS & Express | REST & GraphQL APIs | PostgreSQL, Supabase & Redis | React Native Mobile Apps | LLM Integration (Claude API) | AI-Assisted Development (Claude Code)

WORK EXPERIENCE

Simple Business Group

Dec 2025 - Sep 2026

Software Developer

Santo Domingo, Dominican Republic

- Built a queue-driven request ingestion and dispatch system (**NestJS**, BullMQ/Redis, **PostgreSQL**/Supabase, **Claude API**) that classifies and routes inbound requests, with Human-in-the-Loop approval in Slack for low-confidence cases.
- Built the system on my own with Claude Code: split it into modules, reviewed every diff, and rejected generated code that broke DRY or SOLID principles.
- Reduced ticket response and dispatch time and automated a large share of inbound volume, taking manual sorting and routing work off the operations team.
- Designed idempotent ingestion (SHA-256 payload hashing in Redis), exponential-backoff retries to survive external API outages, and optimistic locking in PostgreSQL to prevent race conditions.
- Designed and optimized AI prompts for production use cases.
- Built workflow automations with n8n.
- Integrated third-party APIs to enhance application functionality.

Newtech / Newfold

Aug 2024 - Oct 2025

Software Engineer

Santo Domingo, Dominican Republic

- Identified and resolved critical software issues, improving application stability.
- Conducted code reviews to ensure adherence to coding standards and best practices.
- Developed responsive and cross-browser user interfaces using **Angular**, **TypeScript**, HTML, and SCSS.
- Worked in a 5-person team, using Git for version control, including branching strategies and pull requests.
- Built and maintained Adobe Experience Manager (AEM) components in Java, using Maven.
- Optimized the Network Solutions website by converting images to WebP, implementing lazy loading, and reducing JavaScript payload, improving measured page load speed by about 50%.

Media Revolution S.R.L

Jan 2023 - Aug 2024

Full Stack Developer

Santo Domingo, Dominican Republic

- Designed and developed **RESTful APIs** using Express.js and PostgreSQL.
- Built full-stack applications using **React**, **Node.js**, and PostgreSQL.
- Dockerized full applications, containerizing both backend and frontend.
- Developed 2 **React Native** mobile apps for iOS and Android, used internally by banking clients handling cryptocurrency, building token-based login and integrating first-party and third-party APIs for payments, exchange, and transactions.
- Translated a wallets API from GraphQL to REST.
- Built the login, routing, and a server-side rendered (SSR) dashboard showing the user's balance in a **Next.js** web app for a banking client (project was not launched).
- Built a WordPress landing page using jQuery, with a HubSpot integration.
- Collaborated with UI/UX teams using Figma to implement design systems.
- Improved frontend component architecture for better reusability and consistency.

PROJECTS

Recibo

Personal Project | Sep 2026 - Present

Android app that links Gmail and Outlook accounts and turns Dominican bank notification emails into a spending tracker with budgets, categories and history. **OAuth 2.0** with PKCE and read-only scopes; an Edge Function exchanges the code and stores refresh tokens in Supabase Vault, so the phone never holds mail tokens. Mail sync every 15 minutes with pg_cron and an Edge Function, with rule-based parsers for BHD bank emails tested against anonymized fixtures. Daily USD/DOP rates from the Central Bank (BCRD); multi-user data isolated with Row Level Security and SQL migrations. Covered with Vitest unit tests, Deno tests and pgTAP database tests in a **GitHub Actions** CI pipeline.

React Native (Expo, Expo Router), TypeScript, Supabase (PostgreSQL, Edge Functions, pg_cron, Vault), TanStack Query, NativeWind, Vitest, pgTAP, GitHub Actions

Awards Web Application

Personal Project | Aug 2025 - Present

Full-stack web application for managing and voting on award categories. Dynamic, responsive Angular frontend, modular NestJS backend, and authentication and database management with Supabase, focused on scalability, performance, and clean architecture principles.

Angular, NestJS, Supabase, TypeORM

EDUCATION

Software Development Technologist Instituto Tecnológico De Las Américas (ITLA) 2023

Santo Domingo, Dominican Republic

Relevant Coursework: Algorithms and Data Structures, Web Application Development, Database Systems, Software Architecture. Academic and personal projects: basic CRUD mobile apps in Kotlin; a restaurant application with a Spring Boot backend; MongoDB Atlas.

CERTIFICATIONS

Building Data Lakes on AWS	Amazon Web Services	2025
Architecting Solutions on AWS	Amazon Web Services	2025
AWS Cloud Technical Essentials	Amazon Web Services	2025

SKILLS

Languages: JavaScript, TypeScript, Python, Java **Frontend:** React, React Native (Expo), Angular, HTML5, CSS3, SCSS, Tailwind CSS

Backend: Node.js, Express.js, NestJS, BullMQ **Databases:** PostgreSQL, Supabase, Redis **APIs:** RESTful APIs, GraphQL

Testing: Jest, Cypress, Vitest, pgTAP **Tools & Cloud:** Git, GitHub Actions, Docker, CI/CD, n8n, AWS

AI Tools: Claude Code (daily development), Codex (diff review) **Other:** Agile Methodologies, Software Architecture, UI/UX Collaboration

Spoken Languages: Spanish (Native), English (Advanced, C1)
